

Robocom Systems Launches AccuSpeechMobile Next-Generation Voice Module

Farmingdale, NY, May 31, 2016. Robocom Systems announced today the release of the newest version of R-Voice, now powered by the AccuSpeechMobile® Intelligent Voice+ Automation Solution, for WMS voice productivity. Robocom and AccuSpeechMobile have completed an OEM agreement that enables the imbedding of the mobile-intelligent AccuSpeechMobile solution into Robcom's Warehouse Management System, providing its customers the most cost-effective voice solution on the market.

"This new approach to voice productivity is a much more powerful system than anything else on the market," said Fred Radcliffe, President of Robocom Systems. "We have successfully integrated AccuSpeechMobile into our WMS without the need for added servers, application layers or extensive customization. That means Robocom can deliver voice-enabled functions to warehouse workers at a fraction of the cost and in a much shorter time than conventional voice applications."

"The AccuSpeechMobile Voice+ Automation Solution provides Robocom customers with all the WMS voice productivity they want, plus application automation, without changing applications, protecting and optimizing existing customer DC investments," said Bob Bova, President and CEO of AccuSpeechMobile. "Our intelligent mobile approach exploits the power of customer's mobile devices powering and optimizing backend mobile applications solely from the mobile device, leaving existing applications untouched."

Voice+ Automation Strengthens Existing Applications

The mobile voice intelligence supporting the new version of R-Voice solution not only voice-enables Robocom applications solely from the mobile device, it can also automate application functions, without changing application code. The AccuSpeechMobile mobile voice logic can use a single utterance to command the device to execute multiple application functions sequentially, further reducing human intervention, increasing transaction speed, accuracy and data integrity. Now Robocom customers can make their existing application even faster, stronger and better.

About Robocom

Robocom Systems develops, licenses and supports Supply Chain Execution software solutions, including Warehouse Management, 3PL Billing, Transportation Management, Voice Technology and Labor Management. An Enterprise Transportation System and Enterprise Resource Planning System round out the Supply Chain Execution offering. Robocom's investment in research and development is keenly focused on the needs of the business leaders responsible for the day-to-day results in warehousing, distribution, third party logistics, transportation and trucking operations.
